

Les Assises Européennes de la Transition Énergétique are 3 days to meet, exchange, share, be inspired and succeed, collectively, in the energy transition of the territories!

An unmissable annual meeting for actors involved in the energy transition of territories since 1999, the European Energy Transition Conference welcomes more than 3,500 participants each year – communities, scientists and experts in ecological transition, economic and associative actors, students for 3 days of debates and meetings. On the program: more than 130 meetings: plenary sessions, round tables, interviews, testimonials, workshops or even site visits, to meet, discuss, share and get inspired!

*Institut National de l'Énergie Solaire – Plateforme Formation & Evaluation (INES PFE)* has been one of the main stakeholders attending the “Assises” by addressing the major challenge of energy transition and solar energy under the framework of ECOVEM. INES PFE has highlighted cutting-edge professional sectors -such as microelectronics- linked to energy transition through the tremendous development of Photovoltaics.

INES PFE held some solid discussions with the university IUT Annecy, which declared a strong interest in training their students of “Measurement techniques in Physics” department (EQF 5-6) with the ECOVEM courses developed by INES. This will has been recently formalized : 70-80 students from the above-mentioned university will receive a 15-hours course in September 2022 on:

- Energy and global warming
- Manufacturing process for PV cells and modules
- Design and maintenance of PV plants

This course will also include a tour visit to INES-CEA laboratories & INES PFE pedagogical platform, as well as exercises on PV cells and modules, and on PV systems.
